# Fictional SOC 2 Type II Test Fixture

## Fictional example - not for submission.

This document contains no real company, auditor, customer, or assessment data. It exists only to verify deterministic local PDF processing and project-data network isolation.

| **System** | Acme Metrics Cloud System |
| **Report type** | SOC 2 Type II |
| **Criteria** | Security and Availability Trust Services Criteria |

## Control ACME-CC8.1 - Production Change Management

Production deployments and emergency changes require review and retain an audit log. The auditor inspected a fictional sample of pull requests and production deployments. No exceptions were noted in the fictional sample.

Subservice organizations are presented using the carve-out method. Complementary user-entity controls require customers to review administrator access quarterly.
